PROFESSIONAL SUMMARY

Systems-minded operator and builder with 8+ years of experience designing automation solutions, managing knowledge systems, and driving operational efficiency in remote, global environments. Proven expertise in workflow automation, AI integration, technical documentation, and cross-functional collaboration. Passionate about removing friction from daily work through thoughtful automation, building calm and scalable operating systems, and enabling asynchronous, transparent communication across distributed teams. Experienced in API integrations, workflow automation, Notion systems architecture, operational tooling, and technical documentation supporting scalable operations and product adoption.

SELECTED PROJECTS

Patra Hiring Automation System

Palm Outsourcing — Sep 2025 – Present

Production-grade hiring operations platform replacing manual recruiting workflows through automation, AI-assisted evaluation, and event-driven workflows — covering candidate screening, interview invites, AI scoring, and recruiter reporting.

Stack: Python · FastAPI · Notion · Postmark · Twilio (WhatsApp) · Hireflix · Slack · Railway · DeepSeek

- Shortlisting time reduced from ~1 week to ~45 minutes
- WhatsApp reminder delivery reduced from 3 days to under 1 minute
- Scaled hiring operations without increasing headcount

Instant Talk Android Client User Guide

Mobile Tornado — Jan 2026 – Present

Full rewrite of a complex 89-page push-to-talk product guide for Mobile Tornado's international partner network, restructured from scratch into a clean, standards-compliant reference document.

Tools: Kimi · Claude · ChatGPT · HTML

- Analysed full 89-page source in a single pass using Kimi's long-context capability
- Adopted as the canonical partner reference by Mobile Tornado's global network

Product Name Generator

Lawazem — Oct 2024 – Dec 2025

Internal automation tool built to standardise Arabic and English product naming conventions at scale across the Lawazem marketplace catalogue.

Tools: Google Apps Script · JavaScript

- Processed 3,000+ products in its first month of use
- Eliminated manual naming inconsistencies across the full catalogue

KM Request Triage Automation

Amazon — Sep 2020 – Sep 2024

Automation system for intake and triage of Knowledge Management requests across Amazon's Middle East operations, eliminating manual queue management and reducing response delays.

- Reduced L2/L3 request triage SLA from 1 hour to 5 minutes
- Operated at scale across Amazon's MENA Knowledge Management function

CORE COMPETENCIES

Automation, AI & Systems

Workflow Automation (n8n, Zapier, Make), AI Integration (DeepSeek, ChatGPT, Claude, Cursor, Kimi, Perplexity), Webhook Orchestration, API Integration, FastAPI, Python, Railway, Process Automation, AI-Assisted Evaluation, Notion Architecture, Information Architecture, Knowledge Management, Data Pipeline Engineering, CRM Management (Salesforce), Tooling Governance, IT Systems, Cross-functional Collaboration

Documentation & Content Tools

Technical Writing, SOP Development, Process Documentation, Help Center Content, HTML, XML, Markdown, CSS, JavaScript, Git, Version Control, XMetaL, Adobe RoboHelp, MadCap Flare, Document360, Paligo

Collaboration & Operations

Async Communication, Remote Team Enablement, Stakeholder Management, Training & Onboarding, Slack, Linear, JIRA, Asana, Microsoft Planner

Data, Development & Lang

Languages:

Arabic (Native), English (Fluent)

PROFESSIONAL EXPERIENCE

Tech Lead (Part-time / Freelance)

Sep 2025 - Present

Palm Outsourcing, United Kingdom (Remote)

- Led recruitment automation and operations enablement, designing and operating production-grade systems supporting high-volume screening, interview processing, and AI-assisted evaluation.
- Owned Notion access/permissions governance, managing workspace architecture, database design, and user permissions to ensure data security and operational efficiency.

- Aligned stakeholders across Recruitment, Operations Management, and Growth teams to ensure automation solutions met cross-functional requirements and business objectives.
- Produced SOPs and process documentation for automated workflows, ensuring knowledge transfer, operational continuity, and team self-sufficiency.
- Built and operated an end-to-end recruiting operations system integrating Notion, Postmark, Twilio WhatsApp, Hireflix, Slack, and Railway.
- Built automation workflows for candidate screening, interview scheduling, reminders, and multichannel engagement across email and WhatsApp.
- Implemented AI-assisted transcript evaluation and candidate-role matching using DeepSeek to improve screening consistency, evaluation speed, and decision quality.
- Accelerated development of automation pipelines and the FastAPI matching engine using AI coding tools (Cursor, ChatGPT Codex), reducing build time and improving code quality through AI-assisted generation and review.
- Used AI research and reasoning tools including Claude, Perplexity, and Kimi to evaluate tooling decisions, accelerate workflow design, and resolve complex API, webhook, and messaging integration challenges.
- Engineered high-reliability messaging and data pipelines with rate limiting, retries, backoff, deduplication, and failure recovery.
- Built FastAPI-based matching engine to rank and link candidates to roles with structured scoring and data integrity controls.
- Reduced operational workload and response times through automated workflow transitions, centralized reporting, and real-time pipeline visibility.
- Established monitoring, logging, and notification systems to support stable operations at scale.

Projects, Achievements & Highlights:

- Reduced WhatsApp screening reminder delivery time from 3 days to under 1 minute through event-driven automation.
- Cut candidate pooling and shortlisting time per role from ~1 week to ~45 minutes using AI-powered matching pipelines.
- Improved email deliverability and reliability by reducing Postmark bounce rate to below 1% through automated validation, throttling, and error classification.
- Enabled instant auto-apply notifications, screening invites, and reminder campaigns via fully automated email workflows.
- Increased candidate response rates and engagement through synchronized email and WhatsApp follow-ups.
- Eliminated recurring data errors and duplicate records through deterministic linking and integrity checks.
- Enabled recruiters and hiring managers to operate asynchronously with real-time visibility into pipeline status.
- Scaled hiring operations without increasing operational headcount.

Technical Writer

Jan 2026 - Present

Mobile Tornado, United Kingdom (Remote)

- Created customer-facing and technical documentation focused on usability, clarity, and product accessibility.
- Applied HTML expertise to format and structure content for optimal readability and accessibility.
- Collaborated closely with internal teams to gain in-depth understanding of products and documentation needs.
- Produced user-facing documentation, UI copy, onboarding guidance, and technical documentation supporting product usability and adoption.
- Developed engaging video tutorials to guide end-users through software applications.

- Analyzed existing and potential content for reuse and single-sourcing opportunities.
- Restructured and maintained documentation systems to improve discoverability, usability, and self-service support.
- Used Claude and ChatGPT to accelerate drafting, restructuring, and editing of technical documentation, ensuring precision and clarity while reducing turnaround time.
- Leveraged Kimi's long-context capabilities to analyse the full 89-page source PDF in a single pass, enabling a complete and accurate content rewrite without loss of technical detail.

Projects, Achievements & Highlights:

- Delivered a complete, standards-compliant rewrite of the 89-page Instant Talk Android Client User Guide — restructuring and clarifying a complex push-to-talk product guide into a clean, partner-ready reference document adopted by Mobile Tornado's global network.

Ecommerce Product Analyst

Oct 2024 - Dec 2025

Lawazem, Saudi Arabia (Remote)

- Contributed to product growth initiatives focused on marketplace quality, catalog consistency, onboarding workflows, and customer experience improvements.
- Reviewed and updated over 2,500 product listings in Arabic and English, ensuring accuracy, consistency, and adherence to localization standards.
- Guided new merchants through onboarding, providing training and ensuring smooth product integration into the marketplace.
- Conducted quality control audits of the marketplace app in collaboration with product managers, improving user experience.
- Collaborated with the merchandising team to launch 2 new product categories and redesigned product labels for 10+ categories.
- Optimized product listing structure, naming consistency, and marketplace visibility to improve discoverability and conversion performance.
- Developed a product name generator tool using Google Apps Script and JavaScript that processed over 3,000 products in its first month, standardizing naming conventions across the catalogue.
- Created onboarding documentation and operational enablement materials supporting merchant activation and account management workflows, leveraging Claude and Perplexity to accelerate research and content drafting.
- Reported directly to the CEO, providing insights on marketplace performance, product enhancements, and merchant activities.

Projects, Achievements & Highlights:

- Revamped Product Listings: Improved the quality and visibility of over 2,500 product listings.
- Launched New Categories: Spearheaded the introduction of 2 new product categories, expanding marketplace offerings.
- Redesigned Product Labels: Enhanced branding by redesigning labels for 10+ categories.
- Developed Product Name Generator: Created a tool to standardize product naming, used for over 3,000 products in its first month.
- Established Listing Standards: Set clear standards for product listings, improving consistency and customer experience.
- Created SOPs: Designed SOPs and documentation for onboarding and sales account management support.
- Enhanced App UX: Conducted a quality control audit of the app, resulting in significant user experience improvements.

Content Analyst

Sep 2020 - Sep 2024

Amazon, Cairo, Egypt

- Developed and maintained automation for intake management of Middle East Knowledge Management requests.
- Implemented continuous improvement projects to enhance content accessibility, localization and usability.
- Collaborated with technical and business teams, Public Relations and Legal to establish company policies.
- Created and maintained customer-facing help content enabling self-service support and improved information accessibility.
- Developed and maintained concise email templates for Customer Service associates to use in resolving customer inquiries.
- Created and maintained internal policy and process reference pages to support Customer Service associates.
- Wrote and published articles to inform Customer Service associates of company policies, news updates and best practices.

Projects, Achievements & Highlights:

- Successfully led the launch of prepaid mobile recharge in the Middle East, resulting in 100% effective contact handling.
- Implemented automation, reducing the Service Level Agreement (SLA) for triaging level 2 and 3 requests to 5 minutes, instead of 1 hour.

Content Program Specialist

Nov 2017 - Jun 2020

Uber, Cairo, Egypt

- Joined the launch of the EMEA CommOps content network as a member of the launch team.
- Successfully onboarded new team members.
- Managed and executed various content operations projects, including translation and localization, standard operating procedures, product and country launches, policy and process updates, and Lean Six Sigma process and quality improvements for rides, eats and compliance related projects across EMEA.
- Utilized SQL to extract, clean and organize data for analysis and reporting.
- Analyzed and processed data using spreadsheets for data-driven decision making and reporting.
- Communicated project status and data reports to stakeholders through visualization tools.
- Created internal operational documentation and external support content across knowledge bases and help centers to improve support consistency and user guidance for various support modalities.
- Worked cross-functionally with product, growth, customer experience, operations, and technical teams across EMEA initiatives and launches.
- Communicated regularly with EMEA stakeholders regarding new and status updates.
- Identified process gaps, determined solutions and implemented updates to drive efficiency improvements.

Projects, Achievements & Highlights:

- Co-led EMEA KB review with 100% completion and 0% content defects in top 50 Issue Types.
- Improved driver satisfaction in SSA through content from 20% to 70% through Six Sigma methodologies.
- Co-led SSA phone support content launch with less than 2% defect in contacts.
- Led COVID Partners outreach campaign in EMEA with 80% satisfaction in 4000 calls.

Community Operations Specialist

Jun 2016 - Nov 2017

Uber, Cairo, Egypt

- Supported launch operations for the Cairo Center of Excellence serving Sub-Saharan Africa markets, contributing to process readiness and operational scalability.
- Supported partners with inquiries, problem-solving, and escalation of issues.
- Led proof of concept for driver payments in SSA, in partnership with EMEA Partner Payments, Trade & Compliance, and SSA Central Ops.
- Led process improvement projects to enhance driver experience.

Projects, Achievements & Highlights:

- Successfully resolved and processed 10,000 driver payments before Christmas Eve, ensuring continuity of service during holidays.

EDUCATION & CERTIFICATIONS

Bachelor's Degree in Language & Simultaneous Interpretation

Cairo Higher Institutes, Cairo, Egypt

Oct 2012 - Jun 2016

Professional Certifications

- Fundamentals of Project Management - MoreSteam University (May 2020)
- Lean Six Sigma Yellow Belt - MoreSteam University (Jun 2020)
